

GC WEBSITE CONTROL

Using the Grow Controlled website and connected GC hardware, a grower is able to remotely monitor and control the environment of their grow, storage, or CurPods from anywhere an internet connection is available. Check on the current status of rooms, changes in environment over a few hours or over the course of months, tweak setpoints, all without the requirement of physically being at the storage. All data on the website is graphed in realtime, and these records are stored to the cloud, which is then available for export in a variety of formats for record keeping. Save time and headaches while getting the most out of your grow facility!
